

These files are the lines that separate the slot reel icons.

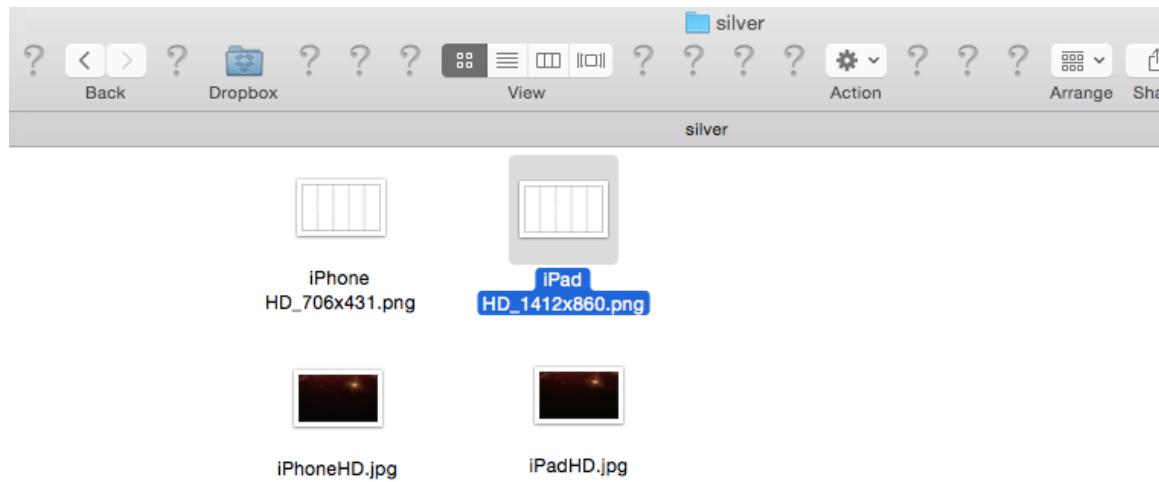

You need these if you want to create a custom background for your files like this:

There is only two sizes included because the HD iPad and iPhone sizes can simply be duplicated and sized down after you make them.

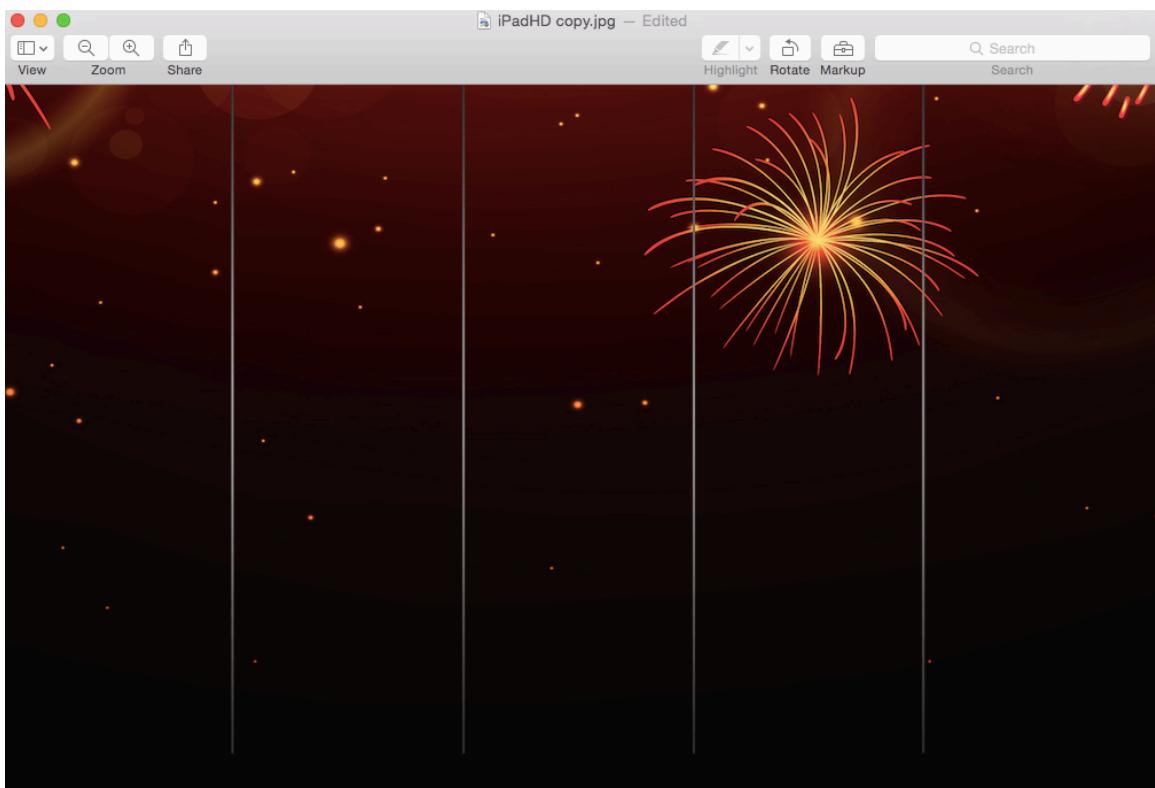

So for example I would just take the image I want to use and get it ready in 2 sizes:

- 1412x860 For iPad HD
- 706 x 431 For iPhone HD

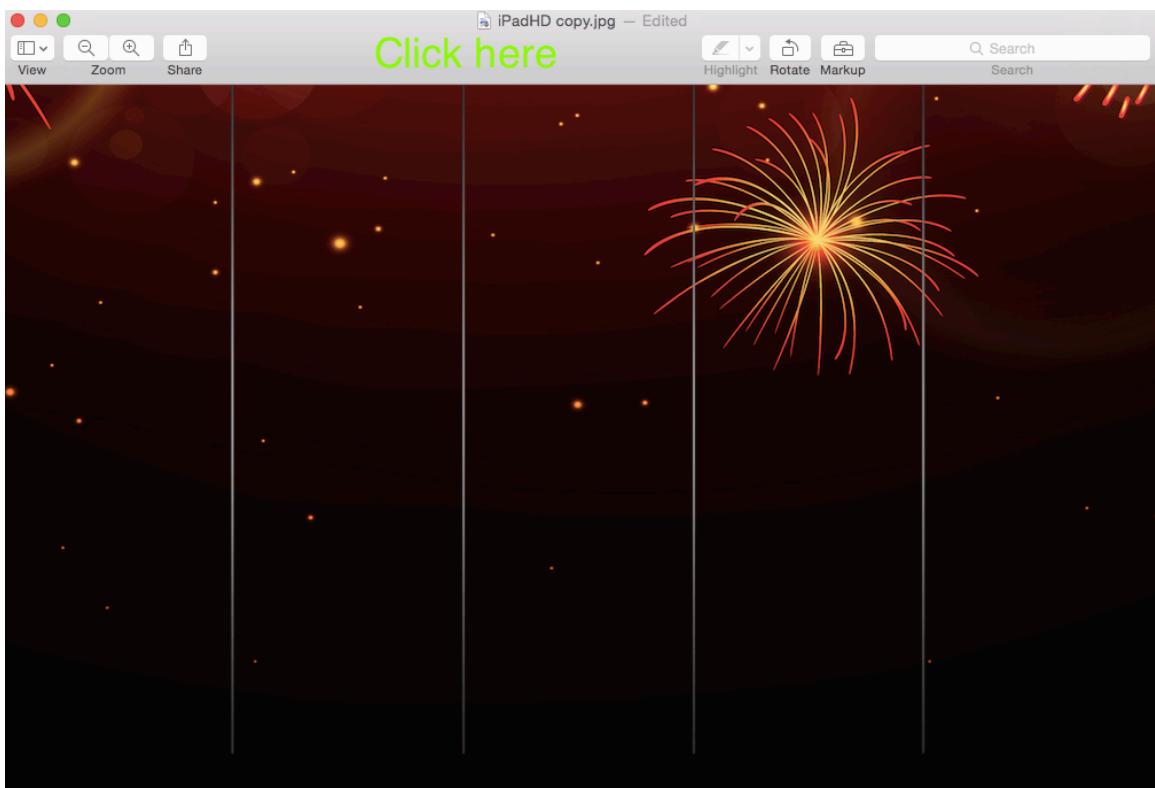

Then I would just place them under the blanks. For this example I will open the divider file for iPad HD and then paste it over the iPad HD background.

Like this:

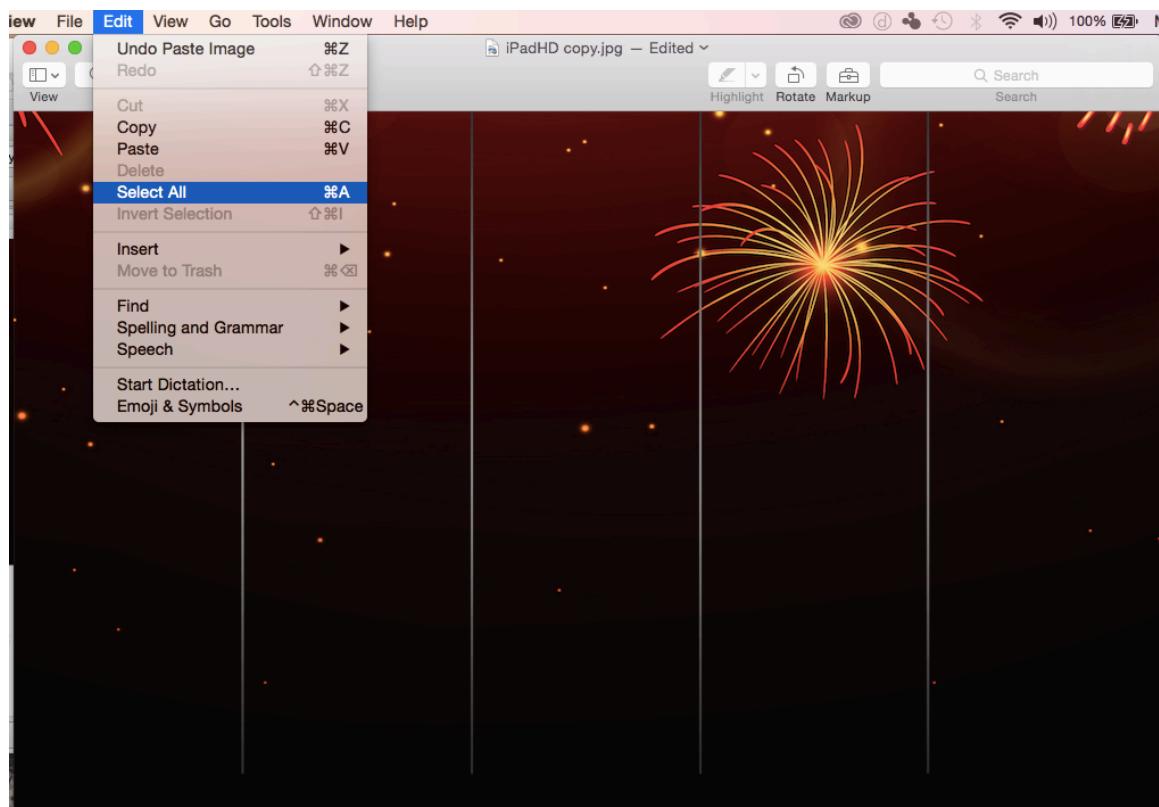

When you do this it will probably be off center, so click on the top part of your screen so the menu knows you are wanting that image and then EDIT / Select all.

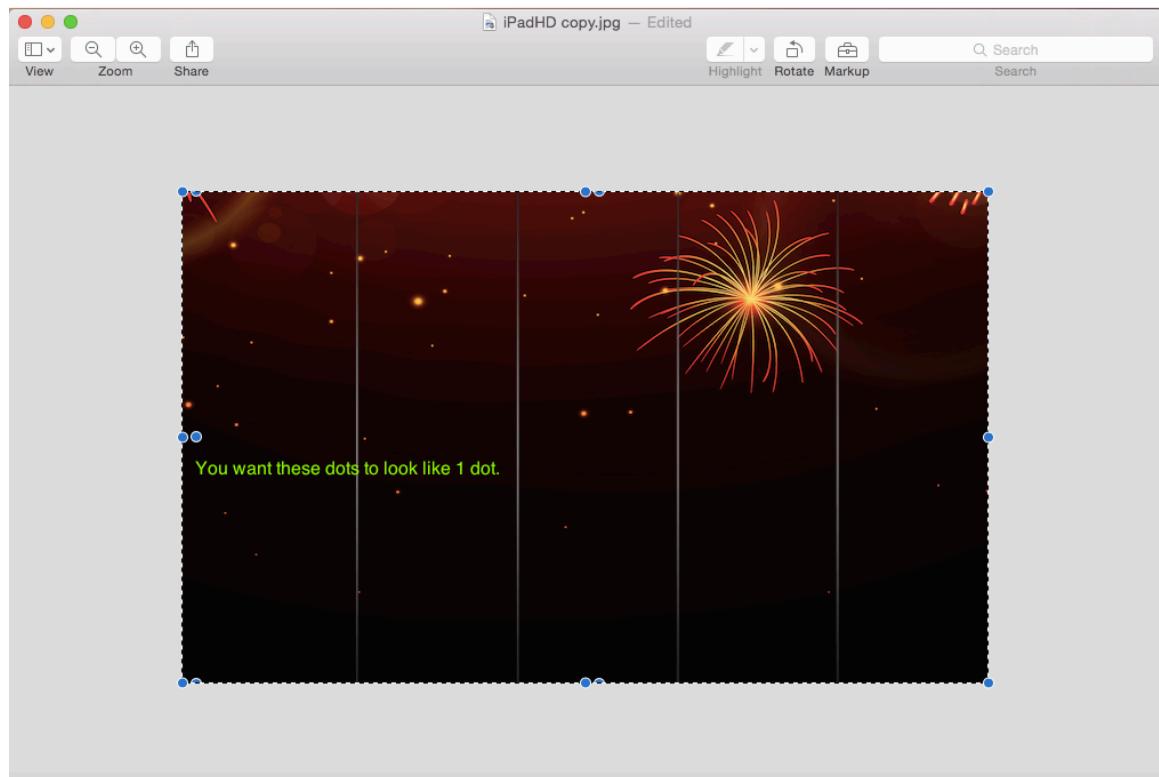

Then:

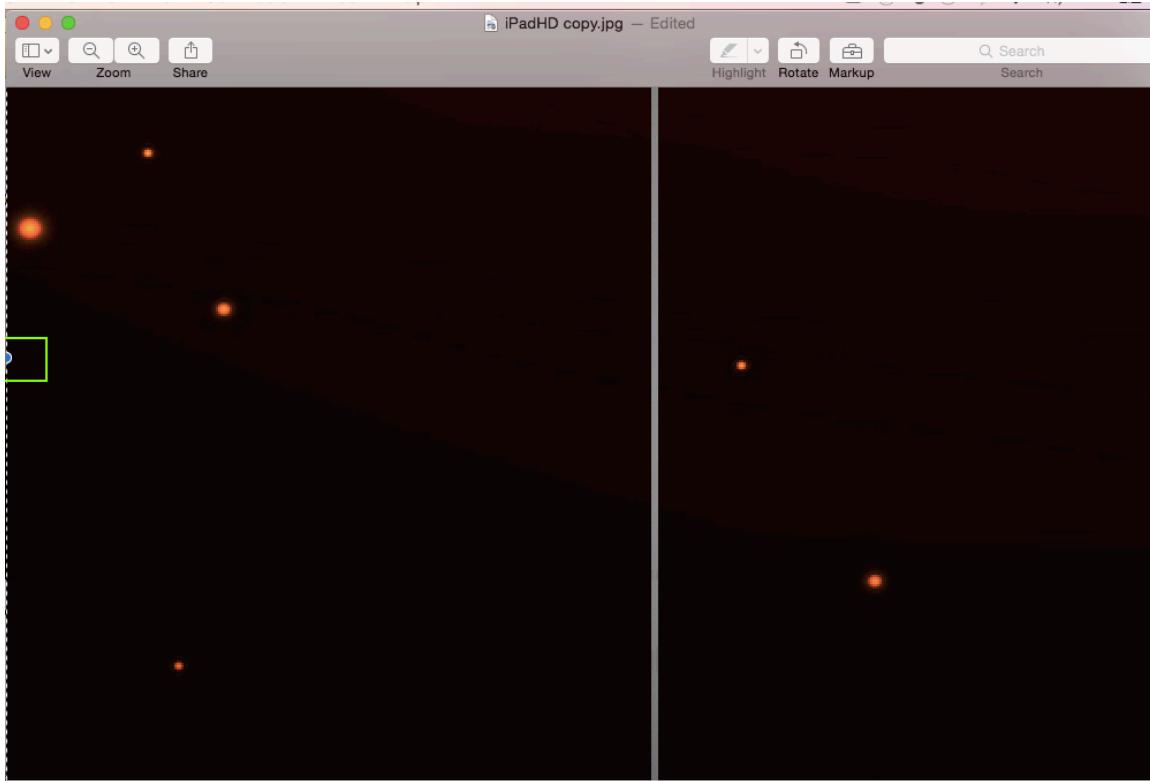

Select all:

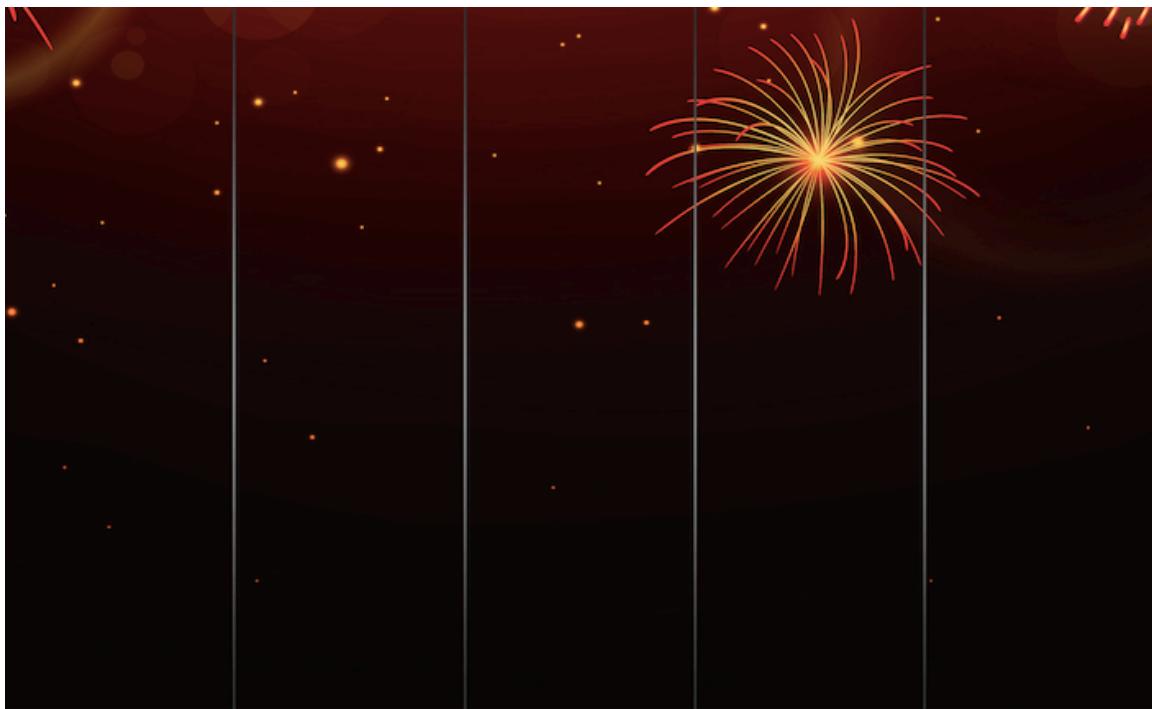

Then zoom out so you can see that it's not lined up.

Like this:

Then close out of it so it saves the new position and open back up.

You can see more details on the next steps to make sure you size this correctly before dragging it into texture packer in the full reskin tutorial.  
(Hint) you size the images (2) pixels less on your PNGs because texture packer will add 2 to each size.

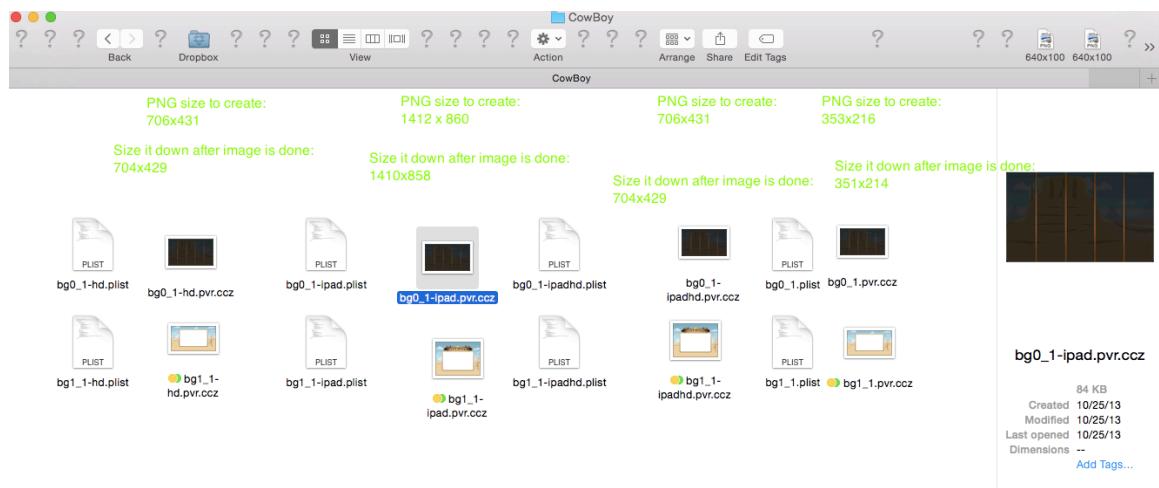

So if this file is 1412x860 you need to now size it down to 1410x858.

But before you do this, duplicate your new file and size it down to the iPad size:

706x430

Then after your iPhone HD file is done size (706x431) you can duplicate it and size it down to 353x216.

See picture:

If you want to see a video on how I do this check it out here:
